SATHVIK CHAVATA

AI/ML Engineer | GenAI & AgenticAI | GCP | Azure | SalesforceAgentForce | M365 Copilot Studio

sathvikch03@gmail.com | +91-9381216261 | linkedin.com/in/sathvik | github.com/sathvik | https://sathvik-chavata.vercel.app/ | Hyderabad, India

PROFESSIONAL SUMMARY

AI/ML Engineer with 3+ years at Accenture building production-grade Generative AI and Agentic AI solutions across GCP, Azure, Salesforce AgentForce, and Microsoft 365 Copilot Studio. Expertise in RAG pipeline architecture, multi-agent orchestration (ADK/GECX/Vertex AI/LangChain), LLM prompt engineering, vector search, and conversational AI. Delivered a B2B e-commerce agentic chatbot on both ADK and Google Customer Engagement Suite (GECX/CES) architectures (200+ users), Salesforce AgentForce bots, a multimodal GCP dashboard, multilingual complaint RCA systems, and an M365 Copilot Studio recruitment intelligence agent. Strong Python engineer with CI/CD, containerization, and international client experience (Rabobank, Netherlands).

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript (React.js), Java, HTML, CSS

AI / GenAI: LLMs, Generative AI, RAG (Retrieval-Augmented Generation), Agentic AI, Multi-Agent Orchestration, Prompt Engineering, NLP, Transformers, Embeddings, Vector Search, Chatbot Development

GCP: Vertex AI, ADK Agents, GECX / CES (Customer Engagement Suite), Gemini, Cloud Run, GCS, Firestore, BigQuery, Cloud Spanner, Vertex DataStore, Discovery Engine (Facet Search), Vertex ML Endpoints

Azure: Azure OpenAI, Azure Cognitive Search, Azure Blob Storage, Azure DevOps CI/CD

Microsoft 365: Copilot Studio, M365 Copilot Agents, SharePoint Integration, Power Platform, Document Intelligence, M365 Ecosystem

Salesforce: AgentForce, Conversational Agents, Document-grounded FAQ Bots

Agentic Frameworks: ADK Agents, GECX/CES (OpenAPI tool registration), LangChain, LangGraph (awareness), CrewAI (awareness), Microsoft Agent Framework, Dialogflow CX, CCAI (GECX)

Frameworks: FastAPI, Flask, Streamlit, Docker, Jenkins, Git, SonarQube, Pytest

Integrations: Magento GraphQL, SAP BTP, OpenAPI-based tool registration, x-ces-session-context header contracts, ADC (GCP service-account auth)

Data & Storage: BigQuery, Firestore, Cloud Spanner, GCS, Azure Blob Storage, SharePoint, JSON/Excel Automation, Vector Embeddings

PROFESSIONAL EXPERIENCE

Accenture – Advanced App Engineering Analyst (Oct2023–Present | 3+Years)

- Architected and deployed a B2B e-commerce conversational AI assistant on GCP for FMCG client in two generations: ADK Agents (Phase 1) and Google Customer Engagement Suite / GECX (Phase 2, Gemini-powered) — enabling outlet owners to search, order, and checkout via natural language across 200+ active B2B users, reducing manual product search effort by ~45%.
- Built end-to-end RAG pipeline: BigQuery product catalog indexed into Vertex DataStore, queried via Discovery Engine with facet search to ground ADK agent responses; achieved 90%+ retrieval accuracy on product queries.
- Designed and implemented a FastAPI microservices platform on Cloud Run (cart, checkout, search, loyalty) serving as the deterministic tool layer for the GECX/CES conversational agent; tools registered via OpenAPI specs using the x-ces-session-context extension for GECX tool registration.
- Implemented header-driven session context contract (x-ces-session-context → X-* HTTP headers → ToolContext) threading per-request customer, cart, and distributor context from GECX platform into backend microservices.
- Integrated backend tool layer with Magento GraphQL (cart/checkout/promotions), SAP BTP, Cloud Spanner (product/price search with vector embeddings), Firestore, and BigQuery — including personalized cart recommendations and loyalty card/promo management.
- Orchestrated multi-agent ADK workflows with 10+ integrated tools covering product search, cart management (add/update/remove), coupon validation, and full checkout — delivering end-to-end order placement within the conversational interface.
- Built JD-CV Analyzer recruitment intelligence agent on Microsoft 365 Copilot Studio: accepts JD and CV uploads (PDF/DOCX/TXT), performs multi-dimensional analysis (skills, experience, education, certifications, domain), outputs suitability score (0-100), generates skill gap analysis, strengths report, improvement suggestions, and targeted interview questions for each missing competency.
- Led GCP migration of Azure-based multimodal AI dashboard (text-to-image, video generation, chart creation, briefing, segmentation, content generation) — replacing Azure Blob Storage with GCS, redeploying on Cloud Run with zero feature regression and improved scalability.
- Developed 2 Salesforce AgentForce solutions: general-purpose NLU conversational agent and a document-grounded FAQ bot using AgentForce native RAG ingestion — achieving 95%+ answer relevance on FAQ queries for a financial services client.
- Built AI-powered enterprise chatbot (React.js frontend + Python backend) with Azure OpenAI and Cognitive Search integration; shipped via Azure DevOps CI/CD pipeline with SonarQube quality gate.
- Traveled on-site to Rabobank HQ (Utrecht, Netherlands) for 1 month as client-embedded engineer; led stakeholder demos, gathered product requirements, and translated field insights into development backlog.

- Designed GenAI multilingual complaint RCA system (Azure OpenAI + Cognitive Search + Blob Storage); automated English/Dutch RCA output to JSON/Excel — cutting analyst RCA turnaround by ~60%; Streamlit UI built for interactive root-cause investigation.
- Maintained and enhanced 3 internal GenAI metrics applications: resolved critical bugs, upgraded deprecated libraries, and improved test coverage across all projects.

PROJECTS

B2B E-Commerce Chatbot Assistant – GCP (ADK Agents + GECX/CES) (2026)

- End-to-end conversational commerce agent for B2B FMCG client built across two architecture phases, serving 200+ active outlet owners with full natural-language ordering capability.

Phase 1 — ADK Agents:

- Agent-side backend lead: sole owner of prompt engineering, tool integration, multi-agent flow orchestration, and RAG data pipeline (BigQuery → Vertex DataStore → Discovery Engine → ADK Agent).
- Stack: Python, ADK Agents, Vertex AI, Firestore, BigQuery, GCS, Cloud Run, Jenkins, Pytest, SonarQube.

Phase 2 — GECX / CES (Google Customer Engagement Suite, Gemini):

- Built 'Genie' conversational ordering agent on GECX/CES platform; designed FastAPI microservices on Cloud Run (cart, checkout, search, loyalty) as the deterministic tool layer invoked by the Gemini-powered GECX agent over HTTP via OpenAPI-registered tools.
- Implemented header-driven session context (x-ces-session-context → X-* headers → ToolContext) to thread customer, cart, and distributor context from GECX into each microservice at request time.
- Integrated with Magento GraphQL (cart/checkout/promotions/orders), SAP BTP, Cloud Spanner (vector-embedding product search + personalized cart), Firestore, and BigQuery.
- Integrated CES conversation-history REST API with GCP service-account (ADC) auth to surface agent conversation logs to the frontend.
- Stack: GECX/CES, Gemini, FastAPI, Cloud Run, Cloud Spanner, Firestore, BigQuery, Magento GraphQL, SAP BTP, OpenAPI, GCS, Jenkins, SonarQube, Pytest.

JD-CV Analyzer – M365 Copilot Studio Recruitment Agent (2025)

- Built a Recruitment Intelligence Agent on Microsoft 365 Copilot Studio; accepts Job Description and Candidate CV uploads (PDF, DOCX, TXT, PPT) and performs 8-dimensional analysis: technical skills, soft skills, experience, education, certifications, domain expertise, responsibilities, keywords.
- Outputs 0-100 suitability score with Strong/Moderate/Weak Fit verdict; generates detailed gap analysis, strengths report, improvement suggestions, and targeted interview questions per skill gap.
- Supports conversational follow-up queries (missing skills, overlapping skills, education match, improvement suggestions) — reducing recruiter manual screening effort.
- Stack: Microsoft 365 Copilot Studio, SharePoint, M365 Copilot Agent Framework, Power Platform, Azure OpenAI (underlying LLM), Document Intelligence.

GCP Migration – Multimodal AI Dashboard (2025)

- Migrated Azure platform (OpenAI + Blob Storage) fully to GCP (Vertex AI + GCS + Cloud Run); preserved all modalities: text-to-image, video generation, charts, briefings, segmentation, content generation.
- Stack: GCP (Cloud Run, GCS, Vertex AI); Azure (OpenAI, Blob Storage) — pre-migration.

Salesforce AgentForce – Conversational Agent & FAQ Bot (2025)

- Built general NLU query agent and document-grounded FAQ bot on Salesforce AgentForce using native RAG document ingestion; achieved 95%+ FAQ answer relevance for a financial services client.

Complaint Analyzer – GenAI RCA System (2024)

- RAG pipeline on Azure (OpenAI + Cognitive Search + Blob Storage) for multilingual (English/Dutch) complaint RCA; automated JSON/Excel output; Streamlit UI for analyst review.
- Impact: ~60% reduction in manual analyst RCA effort.

AI Chatbot Application – Rabobank (2025)

- Enterprise chatbot (React.js + Python + Azure OpenAI); Azure DevOps CI/CD with SonarQube quality gate; client-delivered on-site at Rabobank HQ, Utrecht, Netherlands.

Brain Tumor Detector – Android App (2021)

- CNN model (92% accuracy) for CT scan classification; Android app (Java + XML) with Grad-CAM heatmap overlays for visual explainability; end-to-end mobile medical imaging solution.

EDUCATION

B.Tech in Computer Science, VIT Amaravati | 2019 – 2023 | CGPA: 8.42 / 10
